I want to support …

the Ernest and Helen Scott Haematological Research Institute

The Ernest and Helen Scott Haematological Research Institute is dedicated to furthering our understanding of blood cancers, and how to diagnose and treat them more effectively with less toxicity.

This includes

- Research into how cancers grow and how cancers become drug resistant
- Developing better diagnosis tools for the treatment of cancer
- Developing and evaluating new treatments and accelerating their entry into clinical practice

Daniel Hurst (pictured) completed a skydive and raised £3,000 to support the Ernest and Helen Scott Haematological Research Institute. Daniel was invited to the University to see the impact of research into the treatment of lymphoma, a type of blood cancer, which is a cause close to his heart.

Life is not always easy and life is too short. Live every day to the best you can as you never know when life can change, like mine did at the age of 26. I hope that the public will see all the efforts we put in and try to do something themselves to raise money.
