THE DECLINE OF THE ROMAN EMPIRE has been a subject of fascination and debate for centuries. In this highly original new work, Neil Christie draws from fresh sources, interweaving the latest archaeological evidence, to reconstruct the period's landscape and events. In the process, he rethinks some of historians' most widely held and long-established views: Was the Empire's disintegration caused primarily by external or internal factors? Why did the Eternal City of Old Rome collapse in the West, while the 'New Rome' of Constantinople endured in the East? What was destroyed and what remained of Roman culture after successive invasions by Vandals, Goths, Huns and other 'barbarians', and what was the impact of the new Christian religion? As Christie expertly demonstrates, the archaeology of the late Roman period reveals intriguing answers to these and other questions. Taking an innovative, interdisciplinary approach that combines traditional historical methods and a unique familiarity with the Empire's physical remnants, he uncovers new aspects of Rome's military struggles, its shifting geography, and the everyday lives of its subjects.

Written in a clear, accessible style, *The Fall of the Western Roman Empire* is a perfect introduction for newcomers to the subject, and essential reading for undergraduate students and specialists in archaeology and ancient history.

Neil Christie is Reader in Archaeology at the School of Archaeology and Ancient History at the University of Leicester, UK.
