I graduated from the University of Leicester in 2013. Currently, I am very grateful to be working at one of the most prestigious financial consultancy in the world. I move around from investment banks on short term projects specializing in Capital Markets. There is not a day where I am not challenged! By studying Chemistry, I developed skills such as presentation, research and attention to detail. Three years later, these transferable skills have been strengthened. In 5 years’ time, my aim is to be a Senior Manager/Partner at a Consultancy and a mentor for those new in the industry.

During my studies, my favourite module was 'Advance Analytical Chemistry'. This was a fantastic module taught by Professor Abbot at the time. The Chemistry Department staff were incredibly supportive during my studies. I am so grateful to have had that level of support from them even during off term time.
