

**1. Programme title(s) and UCAS code(s):**

BSc Medical Genetics C431

With optional Year in Industry or Year Abroad (in Europe, USA or Japan)

**2. Awarding body or institution:**

University of Leicester

**3. a) Mode of study: Full time**

**b) Type of study:** Campus-based

**4. Registration periods:**

The normal period of registration is three years (four years for degrees 'with a year in industry/abroad')

The maximum period of registration is five years (six years for degrees 'with a year in industry/abroad')

**5. Typical entry requirements:**

A-levels: typical offer AAB/ABB, normally including at least two relevant science subjects from Biology (preferred), Chemistry, Physics or Maths.

EPQ with A-levels: typical offer BBB + EPQ at grade B. A-level subjects to include two relevant science subjects from Biology (preferred), Chemistry, Physics or Maths. General Studies not accepted.

GCSE: At least Grade C in both English Language and Maths (if not held at A-level)

Access to HE Diploma: Pass relevant diploma with 45 credits at level three, with distinctions in some subjects.

International Baccalaureate: Pass Diploma with 32/30 points, including at least two relevant science subjects at Grade 6 at higher level.

BTEC Nationals: Pass relevant Diploma with DDD plus five GCSEs at B or above including two relevant sciences.

**6. Accreditation of Prior Learning:**

Direct 2<sup>nd</sup> year entry is considered subject to completion of a level 4 programme of comparable content to those studies in year 1 of this programme, passing all modules and with a year mark of at least 65%.

**7. Programme aims:**

The programme aims to provide:

- a flexible teaching and learning programme of high quality that is informed by an active research environment in which students develop their own interests
- a stimulating and supportive working environment;

- an education that will enable graduates to follow a variety of careers including higher degrees and research;

and to enable students to:

- have a broad appreciation of genetics and related disciplines with an emphasis on human health and disease, and advanced knowledge of one or more areas including appreciation of aspects of the underpinning research;
- develop a range of skills including practical and transferable skills;
- gain experience, within the 4 year Industry/abroad options, by working in an external research laboratory or an American, Japanese or another European University.

#### 8. Reference points used to inform the programme specification:

- QAA Benchmarking Statement
- University of Leicester Learning and Teaching Strategy 2016-2020
- University of Leicester Periodic Developmental Review Report
- External Examiners' reports (annual)

#### 9. Programme Outcomes:

Intended Learning Outcomes	Teaching and Learning Methods	How Demonstrated?
<i>(a) Discipline specific knowledge and competencies</i>		
<b>(i) Mastery of an appropriate body of knowledge</b>		
Demonstrate an awareness of main principles of biological sciences, biomedical sciences and related disciplines and explain core concepts of their chosen discipline. Describe current areas of advance in their chosen specialisation(s) within medical genetics.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination, coursework (e.g. practical reports, written reports, data analysis, oral presentations, group reports, video production, poster production, dissertation)
<b>(ii) Understanding and application of key concepts and techniques</b>		
Describe and apply safely appropriate experimental procedures in medical genetics and associated biological sciences disciplines. Apply a scientific approach to the solution of problems in medical genetics and appreciate the rationale of experimental design. Explain core concepts of their chosen discipline.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(iii) Critical analysis of key issues</b>		
Demonstrate a capacity for critical scientific analysis of issues in context of medical genetics and associated biological sciences disciplines	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework

<b>Intended Learning Outcomes</b>	<b>Teaching and Learning Methods</b>	<b>How Demonstrated?</b>
<b>(iv) Clear and concise presentation of material</b>		
Communicate orally and in writing concepts and arguments in medical genetics and associated biological sciences disciplines	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(v) Critical appraisal of evidence with appropriate insight</b>		
Demonstrate the capacity to analyse and criticise evidence from both experimental procedures and the literature.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(vi) Other discipline specific competencies</b>		
In the year in industry/abroad programmes, demonstrate the capacity to work in an industrial or other research laboratory or study in another European, American or Japanese University.	Laboratory work, research project	Research report, practical reports.
<b>(b) Transferable skills</b>		
<b>(i) Oral communication</b>		
Communicate orally, with clarity and coherence, concepts and arguments in medical genetics and associated biological sciences disciplines	Tutorials, seminars, practical classes, computer classes, discussions, research projects, group work.	Oral presentations, group reports, tutorials.
<b>(ii) Written communication</b>		
Communicate in writing, with clarity and coherence, concepts and arguments in Medical Genetics and associated Biological Sciences disciplines	Tutorials, seminars, practical classes, computer classes, discussions, research projects, group work.	Examination and coursework
<b>(iii) Information technology</b>		
Demonstrate the effective use of IT for accessing databases and scientific literature; manipulating, processing and presenting data; presenting written assignments.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(iv) Numeracy</b>		
Understand and manipulate numerical data, solve problems using a variety of methods and apply numerical and statistical techniques to data analysis.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(v) Team working</b>		
Demonstrate the ability to work as part of a group	Tutorials, group work, research projects.	Group reports, use of class data to generate practical reports

Intended Learning Outcomes	Teaching and Learning Methods	How Demonstrated?
<b>(vi) Problem solving</b>		
Apply a scientific approach to the solution of problems in the context of medical genetics and appreciate the rationale of experimental design.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(vii) Information handling</b>		
Demonstrate the capacity to access a variety of resource materials and to analyse evidence from both experimental procedures and the literature.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, and private study.	Examination and coursework
<b>(viii) Skills for lifelong learning</b>		
Demonstrate the acquisition of the skills and attributes necessary for lifelong learning, including: intellectual independence, effective time management, the ability to work as part of a team, the use of IT and the capacity to access and utilise a variety of resource materials.	Lectures, tutorials, seminars, practical classes, computer classes, discussions, research projects, group work, directed reading, resource-based learning, private study, career development programme.	Examination, coursework, personal development planning.

#### 10. Progression points:

In cases where a student has failed to meet a requirement to progress he or she will be required to withdraw from the course.

The programme follows the standard scheme of progression set out in Senate Regulation 5 with the following additional requirements.

The Board of Examiners reserves the right to determine the progression of students who carry failed credits but have the right to a further resit: where these credits are in modules that are pre-requisite for subsequent modules or where the student has a low overall level of attainment, the Board can require the student to resit the failed modules without residence rather than proceed to the next year carrying failed modules to be resat alongside the current modules.

In cases where a student has failed to meet a requirement to progress he or she will be required to withdraw from the course

#### 11. Scheme of Assessment

The programme follows the standard scheme of award and classification set out in Senate Regulation 5.

#### 12. Special features:

In year 1, students receive a broad education in core bioscience disciplines with a focus on genetics, along with specific teaching in medical biosciences and key skills. In years 2 and 3, the core programme, including Medical Genetics modules specific to them, is supplemented with options from the Biological Sciences programme. Opportunities are available to

take placements within related industries, or to study in other European, American or Japanese universities.

The School has a strong reputation for research and the range of staff expertise enables provision of research-led programmes that offer breadth and depth.

### **13. Indications of programme quality**

External examiner evaluations.

### **14. External Examiner(s) reports**

The details of the External Examiner(s) for this programme and the most recent External Examiners' reports for this programme can be found [here](#).

### **Appendix 1: Programme structure (programme regulations)**

### **Appendix 2: Module specifications**

See module specification database <http://www.le.ac.uk/sas/courses/documentation>

### **Appendix 3: Skills matrix**

## Appendix 1: Programme structure (programme regulations)

### BSc Medical Genetics C431

With optional Year in Industry or Year Abroad (in Europe, USA or Japan)

## BSc Medical (Genetics)

### Year 1

#### *Semester 1*

##### *Core modules*

BS1030	Biochemistry (30)
BS1040	Microbiology & Cell Biology (30)

**Semester total: 60 credits**

#### *Semester 2*

##### *Core modules*

MB1080	Medical Biosciences (20)
BS1050	Genes (20)
BS1060	Physiology, Pharmacology & Neuroscience (20)

**Semester total: 60 credits**

### Year 2

#### *Semester 1*

##### *Core modules:*

MB2051	Current Issues in Medical Genetics (15)
BS2009	Genomes (15)

##### *Modules to a value of 30 credits to be chosen from:<sup>1</sup>*

BS2013	Physiology and Pharmacology (15)
BS2015	Physiology of Excitable Cells (15)
BS2030	Principles of Microbiology (15)
BS2031	Virology (15)
BS2076	Evolutionary & Developmental Biology (15)
BS2092	Molecular and Cell Biology (15)

**Semester total: 60 credits**

#### *Semester 2*

##### *Core modules:*

BS2000	Research Topic (15)
BS2026	Genes, Development & Inheritance (15)
BS2040	Bioinformatics (15)

##### *Modules to a value of 15 credits chosen from:<sup>1</sup>*

BS2014	Exercise Physiology and Pharmacology (15)
BS2032	Eukaryotic Microbiology and Immunology (15)
BS2066	Behavioural Neurobiology (15)
BS2077	Neurobiology & Animal Behaviour (15)
BS2091	Biochemistry of Nucleic Acids (15)
BS2093	Protein Control in Cellular Regulation (15)

**Semester total: 60 credits**

### With a Year in Industry (option)

#### *Core module:*

BS3400	Year in Industry Research Placement (0) (Year-long)
--------	---

## Year 3

### Semester 1

#### Core modules

Research Project: 30/45 credits.

Choose ONE from the following five options:

- i)      BS3101              Experimental Research Project A (15) **and**  
          BS3102              Experimental Research Project B (30) (Year-long module)  
          OR
- ii)     BS3201              Analytical Research Project (30)  
          OR
- iii)    BS3301              Education Research Project A (15) **and**  
          BS3302              Education Research Project B (30) (Year-long module)  
          OR
- iv)     BS3501              Field Research Project A (Operation Wallacea) (15) **and**  
          BS3102              Experimental Research Project B (30) (Year-long module)

#### Plus core module

BS3031      Human Genetics (15)

Choose TWO OR THREE modules from:

#### Semester 1

BS3000      Evolutionary Genetics (15)

#### Semester 2

BS3011      Microbial Pathogenesis and Genomics (15) (15)

BS3018      Genes & Development (15)

#### Semester 1

For semester 1, make the credits add up to 60 by choosing from the modules listed below: <sup>1</sup>

BS3010      Gene Expression: Molecular Basis & Medical Relevance (15)

BS3015      Molecular & Cellular Immunology (15)

BS3019      Plant identification Skills (15)

BS3054      Molecular and Cellular Pharmacology (15)

BS3055      Molecular and Cellular Neuroscience (15)

BS3058      Conservation Biology (15)

BS3064      Comparative Neurobiology (15)

BS3068      Microbial Biotechnology (15)

BS3070      Structural Biology (15)

BS3078      Subtropical Physiology and Ecology (15)

**Semester total: 60 credits**

#### Semester 2

#### Core module:

MB3050      Medical Genetics (15)

For semester 2, make the credits add up to 60 by choosing from the modules listed below: <sup>1</sup>

BS3003      Cancer Cell & Molecular Biology (15)

BS3013      Human and Environmental Microbiomics (15)

BS3016      Neuroscience Futures (15)

BS3033      Physiology, Pharmacology and Behaviour (15)

BS3056      Cellular Physiology of the Cardiovascular System (15)

BS3059      Current and Future Therapeutics (15)

**Semester total: 60 credits**

<sup>1</sup> Module selection subject to timetable restrictions.
