The following module specifications reflect the most current planning for module delivery in the 2021/22 academic year. In planning for module delivery in 2021/22 the University will continue to respond to the UK government’s projected road map, and also to any further relevant national developments and public health requirements relating to the coronavirus pandemic. The University will continue to develop our approach to delivery and assessment in 2021/22 and these specifications may be subject to change in the event of updating national guidance or public health requirements. The specifications will be updated as soon as practically possible to reflect changes as they arise.

**Student Workload (hours)**

- Synchronous Lectures: 16
- Synchronous Small Group Teaching: 18
- Synchronous Practical Classes/Workshops/Professional Placements: 4
- Synchronous Other: 8
- Asynchronous Lectures/Presentations: 8
- Asynchronous Other: 0
- Guided Independent Study: 104
- Total Module Hours: 150

**Intended Learning Outcomes**

On successful completion of the module, students should be able to:
- define key geographical concepts, such as place, space, spatiality, scale and network;
- discuss how geographers have studied contemporary geographies of globalization;
- describe geographical identity, difference and inequality at various spatial scales;
- outline how place, spatiality and networks matter to a variety of social, cultural, economic and political processes that are studied by contemporary geographers.

**Teaching and Learning Methods**

Asynchronous on-line lectures & learning activities, synchronous on-line lectures and discussions, face to face seminar discussions and learning activities, Directed Reading, Independent Study

**Assessment Methods**

Exam, Coursework Portfolio (based around learning activities conducted on module)

**Pre-Requisites**

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Understand the various historical and contemporary ways of conceptualising nature
- Acquire a historical perspective of environmental governance
- Explain how environmental values are changing and with what social consequences
- Use a variety of case examples to explain ecosystem degradation, land use conflicts, issues social justice, and resource extraction dilemmas
- Understand a variety of solutions to ongoing environmental tensions through restoration projects, degrowth, and alternative knowledges

Co-Ordinators

Coordinator: Kirsten Barrett

Pre-Requisites

- 

Co-Requisites

- 

Excluded Combinations

- 

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- describe and summarize quantitative geographical data numerically and graphically;
- explain the difference between samples and populations of quantitative data and the implications these differences have for manipulating sampled data;
- select an appropriate test of difference or association to test hypotheses based on the descriptive statistical analyses;
- carry out tests of difference (t-tests and chi-sq tests) on geographical data and interpret and evaluate the results;
- perform ordinary least squares regression and interpret the relationship between response and explanatory variables.

Teaching and Learning Methods

Lectures; Computer Based Practical Classes.

Assessment Methods

Test
Submission One: Practical One
Submission Two: Practical Three
Submission Three: Practical Five
Submission Four: Practical Eight
Submission Five: Practical Nine

Guided Independent Study: Indicative Activities

Reading for seminars, reviewing lecture notes and following up on concepts with materials from Blackboard resources folder or independent searches for information, preparing for practical exercises or completing these.

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>003</td>
<td>Coursework</td>
<td>70</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Intended Learning Outcomes

On successful completion of the module, students should be able to:
1) Outline the concept of the “Earth System” and be able to illustrate this with examples of its functioning (e.g. interactions between the “spheres”)
2) Explain the major controls on planetary temperatures and the implications for planetary habitability.
3) Understand the nature and divisions of geological time
4) Outline the major classes and divisions of life on earth
5) Explain the operation of the three major biogeochemical cycles – the carbon, nitrogen and phosphorous cycles
6) Illustrate the role of the global carbon cycle in both moderating and driving global climate trends
7) Consider the impacts of human activities upon the operation of the Earth System

Teaching and Learning Methods

Learning objectives are taught via a series of online guided activities/computer practicals, reading assignments and worksheets and online recordings. These will be supported by weekly sessions for students to review materials and their own supplementary readings with a tutor. Five on campus face-to-face tutorials are spaced throughout the course. These will be focussed on key concepts using pre-assigned readings and worksheets as a means to begin the discussions. Supplementary numeracy and scientific terminology refresher material, designed to support ongoing learning throughout this module and the first year physical geography material, will available on Blackboard and (used where appropriate for the student) will be taught through self-help and self-assessment materials provided on the VLE.

Assessment Methods

Students are assessed via two short answer question worksheets and a final selection of coursework essays

Pre-Requisites

Co-Requisites

Excluded Combinations

Guided Independent Study: Indicative Activities

Assigned reading and associated preparation for the three course tutorials, continuous reading to support lecture materials (course text book and specific reading list provided), science and numeracy self-assessment and worksheet material, optional preparation for attendance of (optional) weekly clinic sessions.
Module Specification

GY1432  The Contemporary Earth System

Academic Year: 2021/2

<tr>
<td>Guided Independent Study</td>
<td>82</td>
</tr>
<tr>
<td>Total Module Hours</td>
<td>150</td>
</tr>
</tbody>
</table>

Intended Learning Outcomes

On completion of the module, students will be able to describe and account for:
- the Earth's global energy exchanges;
- the global and regional pattern of atmospheric and oceanic circulations;
- climate classification systems and the distribution and differences between global climates;
- global patterns of weathering and soil forming processes and products;
- the distribution of terrestrial biomes and their characteristics.

Teaching and Learning Methods

Lectures, Supervised problem solving, Directed Reading, Independent Study, Self Assessment

Assessment Methods

Pre-Requisites

Co-Requisites

Excluded Combinations

Guided Independent Study: Indicative Activities

Required reading, recommended videos, short video clips on particular concepts, development of thought/concept maps

</tbody>
</table>

Intended Learning Outcomes

On successful completion of the module, students should be able to:
- understand the reasons for the changing nature of how the discipline of Geography presents itself
- explain key theoretical perspectives in Human Geography, including their historical origins and contemporary relevance
- critically assess and experiment with different theoretical approaches that move across all areas of Human Geography
- understand how theorisation is performed across a variety of different media, as well as within academic texts

Teaching and Learning Methods

Lectures, seminars, tutorials and guided independent study

- Guided Independent Study 120
- Total Module Hours 150

Guided Independent Study: Indicative Activities

Reading for seminars, reviewing/making deeper lecture notes having followed up reading, background reading for assignments.

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Use a 'commodity circuits' approach to examine contemporary geographical developments in some of the key sectors in the global economy.
- Use 'nexus thinking' to examine the dynamics between key 'regions' in the global political and economic system.
- Develop effective written communication and research skills about commodities and economies and their relevance for geographical research and practice.

Teaching and Learning Methods

Lectures; Tutorials; Surgeries; Directed Reading; Independent. Module assessment includes 1 formative assessment weighted at 20% and 1 summative assessment weighted at 80%

Assessment Methods

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- describe the development of different geographical modes of thinking about politics
- define and apply key geographical concepts pertaining to geopolitics and political geography
- explain the relationship between the state and territory at different spatial scales
- explain the changing forms and functions of the state
- explain the relationship between place, participation and citizenship

Intended Learning Outcomes

Explain the greenhouse effect and the role of humans in the climate system;
Explain the role of the IPCC, governments and policy makers in assessing scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts and options for adaptation and mitigation;
Describe how selected regions and ecosystems are likely to be affected by climate change up until 2100, including identification of the major risks, impacts and vulnerabilities;
Interpret recent scientific studies on climate change impacts in the broader context and demonstrate an ability to write scientific material aimed at different audiences (popular and professional);
Access, analyse and summarise climate data and assess vulnerabilities and likely adaptation and mitigation options.

</tr>
</tbody>
</table>

**Intended Learning Outcomes**

On successful completion of the module, students should be able to:

- explain the physical principles underlying remote sensing studies. This includes being able to define key concepts and terminology used in remote sensing such as electromagnetic radiation, surface reflectance and spectral reflectance curves;
- associate the data that these sensors provide with an understanding of interactions of radiation with different surface features and geographical phenomena;
- demonstrate their ability to manipulate satellite data using dedicated image-processing software. Make visual interpretations of satellite images to support theory;
- apply the principles of image acquisition and interpretation to making decisions on the appropriateness of the use of remotely sensed data to address geographical issues in both human and physical environments.

**Teaching and Learning Methods**

Lectures; Seminars; Computer Practical Classes; Independent Study

**Assessment Methods**

**Pre-Requisites**

**Co-Requisites**

**Excluded Combinations**

- **Guided Independent Study: Indicative Activities**

Reading for seminars, reviewing lecture notes and following up on concepts with materials from Blackboard resources folder or independent searches for information, background reading for assignments
Module Specification

GY2431 Data Analysis

Academic Year: 2021/2
Module Level: Year 2
Scheme: UG
Department: Geography
Credits: 15

Period: Semester 1
Occurrence: E
Coordinator: Mark Powell
Mark Scheme: UG Module Mark Scheme

Student Workload (hours)
- Synchronous Lectures: 1
- Synchronous Small Group Teaching: 4
- Synchronous Practical Classes/Workshops/Professional Placements: 22
- Synchronous Other: 3
- Asynchronous Lectures/Presentations: 22
- Asynchronous Other: 98
- Guided Independent Study: 98
- Total Module Hours: 150

Intended Learning Outcomes
On successful completion of the module, students should be able to:
- analyse and critically evaluate geographical problems
- adopt appropriate methodological strategies for the quantitative analysis of geographical data
- interpret quantitative analyses of geographic data
- write up quantitative analyses and interpretations of geographical data in a stylistically appropriate and concise manner

Teaching and Learning Methods
Lectures, Worksheets, Practical Classes, Workshops, Clinics, Guided Study

Intended Learning Outcomes

On successful completion of the course, students should be able to:
- Describe the main components of the terrestrial water balance, along with common methods for their measurement, and explain how these components interact with one another;
- Critically evaluate the factors controlling hydrological response in river catchments with a range of different characteristics;
- Describe the variety of fluvial forms;
- Account for the variety of channel forms;
- Critically evaluate the concepts of magnitude, frequency and equilibrium morphodynamics in understanding the development of fluvial landscapes

Teaching and Learning Methods

Lectures, Fieldwork, Exercises in Catchment Hydrology and River Geomorphology, Independent Study, Tutorials and Guided Study

</table>

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Demonstrate comprehension of basic ecosystem and biogeographical concepts and the role animal and plant species to shape their communities.
- Demonstrate knowledge on biodiversity, species and evaluation of ecosystem diversity and functioning at a range of spatial scales.
- Understand process of evolution, speciation and extinction to understand historical and evolutionary links between species and ecosystems; appreciate how environmental remote sensing can be used to provide spatial and temporal information on both the biosphere and environmental change.
- Learn how to run a simple ecological model.

<td></td>
<td></td>
</tr>
<tr>
<td>Total Module Hours</td>
<td>150</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Describe the major global climatic shifts, trends and cycles during the Quaternary Period
- Explain the basic principles underlying orbital ('Milankovitch') climate forcing and describe the evidence that supports this hypothesis
- Explain how the Greenland and Antarctic provide records of global climatic changes and describe the main ‘internal’ drivers of abrupt global climate change identified in these archives
- Summarise the range of palaeo-environmental proxy data sources used by Quaternary scientists
- Describe the principal geochronological techniques utilized in Quaternary science

Teaching and Learning Methods

The module will be taught using a mixture of online lectures, online guided activities, a guided computer practical carried out online/remote, guided/structured reading materials, a 2 hour laboratory practical, and face to face tutorials spread through the term

Assessment Methods

The module will be assessed via a piece of coursework based around the analysis of real (ice core, ocean core) palaeoclimatic datasets, and via a final suite of coursework essays selected from a list of topics covering the breadth of the course

Pre-Requisites

Co-Requisites

Excluded Combinations

- Guided Independent Study: Indicative Activities

Reading materials provided in specific lecture reading lists, analysis and presentation of data provided from practical 1 (used in coursework assessment), literature search and association reading required for interpretation of data analysed in CW1

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Draw on geographical debates and concepts to analyse contemporary environmental issues and challenges;
- Analyse and critique key concepts, with reference to diverse and contested values;
- Assess the role of alternative knowledge in shaping and contesting environmental practice;
- Critically evaluate prospects for new environmental futures through analysis of various contemporary issues;
- Apply critical thinking to contemporary environmental challenges encountered beyond the core module content.

Teaching and Learning Methods

Online lectures, tutorials, seminars, virtual fieldwork, films, guided review/learning activities

Assessment Methods

Two pieces of coursework. CW1: 30%, CW2: 70%

Pre-Requisites

Co-Requisites

Excluded Combinations

Guided Independent Study: Indicative Activities

Reading for seminars/tutorials; preparation and reading for assignments; key readings and exercises for online lectures and note taking; preparation for virtual field visit

### Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Explain how geo-historical processes and everyday socio-political struggles interrelate to govern and shape contemporary cities of the global south
- Draw critical comparisons between different topics, cities, geographies and theoretical approaches connected by the module theme
- Critically assess contemporary urbanist theories using diverse forms of empirical data
- Examine contemporary challenges for cities of the global south and creatively explore their possible futures
- Develop effective oral and written communication skills about cities of the global south, urban futures and their relevance for geographical research and practice

### Teaching and Learning Methods

- Guided Independent Study: 120
- Total Module Hours: 150

**Intended Learning Outcomes**
On successful completion of the module, students should be able to:
- Explain the relationships between place, place-making and economic markets
- Utilise a (critical) topographic approach to examine marketplaces as affective, as well as material, social and discursive assemblages
- Interrogate the material-semiotics of place to analyse the geographical extent of a market
- Engage a topographical analysis to articulate the intersections, interrelations and interdependancies through which markets become economic as well as geographical entities
- Develop effective research skills about cities, markets and economics, and effective communication skills for their presentation

**Teaching and Learning Methods**
Lectures; Tutorials; Directed Reading; Workshops; Independent Study

**Assessment Methods**

**Pre-Requisites**

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- describe the development (and historical context) of different intellectual traditions of thinking about geopolitics
- explain the difference between formal geopolitics, practical geopolitics, and popular geopolitics
- describe and explain key conceptual approaches associated with critical and feminist geopolitics
- apply critical geopolitical concepts to analyse a historical case study associated with the Cold War and/or decolonization
- apply critical geopolitical concepts to analyse one or more contemporary international case studies

Teaching and Learning Methods

Short online lectures; structured activities on virtual learning environment; online tutorials; directed reading; virtual learning environment

Assessment Methods

### Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Demonstrate an understanding of contemporary migrations within historical contexts of human migration and socio-spatial change.
- Demonstrate critical understanding of different forms of forced and voluntary migration across the globe and how bordering practices shape experiences of migrants.
- Critically engage with the practices, policies and discourses of receiving societies and the agency of migrants around transnationalism and home.
- Demonstrate an appreciation of theories and concepts used to understand how people live and experience ethnic diversity in different places and spaces.
- Generate focused and comprehensive written and oral presentations.

### Teaching and Learning Methods

Teaching will be in the form of lectures, guided activities and student-led seminars. The seminars will take place in the second part of the semester and will involve student presentations.

### Assessment Methods

Presentation/exam

**Mark Scheme:** UG Module Mark Scheme

**Academic Year:** 2021/2  
**Module Level:** Year 3  
**Scheme:** UG  
**Department:** Geography  
**Credits:** 15

**Intended Learning Outcomes**

On successful completion of the module, students should be able to:

- Explain and discuss fundamental concepts related to visual perception and representation, including but not limited to: symbol, glyph, visual variables, dimensionality, models of phenomena, graphical integrity and distortion, data ink, visual hierarchy
- Explain and discuss fundamental concepts related to cartography, including but not limited to: map elements, projection, normalization, classification, choropleth mapping, proportional symbols mapping, dot mapping
- Describe advantages and issues of main visualization methods, and identify an appropriate visualization method for any given case
- Apply the visualization design process to create effective visualizations
- Use software tools (e.g., R, Excel, Illustrator, QGIS) to create effective visualizations

**Teaching and Learning Methods**

Lectures, Practical Classes and Workshops (computer-based exercises)

**Assessment Methods**

Pre-Requisites

Co-Requisites

Excluded Combinations

- **Guided Independent Study: Indicative Activities**
  
The students will be presented with three (non-mandatory) formative assignments, that will guide them through a visualization design process. A first assignment will require the identification of a topic and research question. A second assignment will focus on retrieving appropriate data for the selected topic, and conduct an analysis of the collected data (not necessarily using statistical tools). A third assignment will require to create a draft of a visualization based on the analysis conducted for the second assignment. The materials produced for the formative assignment can (but not necessarily have to) be used as base for the summative assignment.

Background reading on the topics discussed during lectures and practicals will be provided.

Academic Year: 2021/2
Module Level: Year 3
Scheme: UG
Department: Geography
Credits: 15

Period: Semester 2
Occurrence: E
Coordinator: Arnoud Boom
Mark Scheme: UG Module Mark Scheme

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Explain the theory of stable isotope fractionation using appropriate terminology and scientific principles
- Collect, prepare and analyse samples for stable isotope analyses
- Analyse and discuss stable isotopic datasets
- Write scientific journal article
- Understand isotope fractionation in environmental processes

Teaching and Learning Methods

Lectures
Seminars
Laboratory practicals/ demonstration

Assessment Methods

Pre-Requisites

Co-Requisites

Excluded Combinations

Guided Independent Study: Indicative Activities

Reading for lectures, reviewing/making deeper lecture notes having followed up reading, background laboratory work, supporting reading for course work.

**Period:** Semester 1  
**Occurrence:** E  
**Coordinator:** Mick Whelan  
**Mark Scheme:** UG Module Mark Scheme

**Academic Year:** 2021/2  
**Module Level:** Year 3  
**Scheme:** UG  
**Department:** Geography  
**Credits:** 15

**Intended Learning Outcomes**

On successful completion of the module, students should be able to:
- Demonstrate an understanding of the processes controlling surface and groundwater quality – particularly when these systems receive point- and diffuse-source pollution.
- Demonstrate an awareness of water quality standards for different water uses (e.g. drinking water, ecological quality) and of the legal frameworks within which such standards are applied.
- Apply and correctly interpret simple water quality models for assessing pollutant concentrations in surface waters receiving waste water from point sources.
- Identify appropriate management strategies which can be applied to different pollutant types and demonstrate an understanding of why different approaches are required for different pollutants.

**Teaching and Learning Methods**

The bulk of teaching will be through the medium of lectures. Additionally, there may be a one 1-day field excursion (waste water treatment plant and sustainable urban drainage), one ½ day (4 hour) sampling trip and one ½ day (3 hour) laboratory practical class for analysis of samples in the laboratory (3 hours).

**Assessment Methods**

- 

**Pre-Requisites**

- 

**Co-Requisites**

- 

**Excluded Combinations**

- 

**Guided Independent Study: Indicative Activities**

Reading selected from distributed list and supplemented with additional material. Course work will require some independent investigative work using maps and web-based literature, as well as accessing the primary literature. Students will also need to spend time revising for the examination.

</tbody>
</table>

Intended Learning Outcomes

On successful completion of the module, students should be able to:

- Relate certain types of biosphere-atmosphere interactions to particular biomes
- Evaluate the role of different drivers of biospheric processes
- Explain a range of feedbacks between the biosphere and other components of the Earth system
- Evaluate the role of atmosphere-biosphere interactions in the climate system
- Explain the role of carbon dioxide and photosynthesis in biosphere-atmosphere interactions

No. Assessment Description Weight % Qual Mark Exam Hours Ass' Group Alt Reass't

001 Extended Glossary 20
002 Paleohydraulics Exercise 30
003 Form and Process in Alluvial Rivers 50

Intended Learning Outcomes

On successful completion of the module, students should be able to:
- explain the dynamics of fluvial processes operating in alluvial rivers and their morphological and sedimentological consequences;
- define flow resistance and its various sources and apply simple flow resistance models to estimate hydraulic parameters;
- critically evaluate models of bedload sediment transport; describe factors controlling the processes and rates of bank erosion;
- explain some how feedbacks between the form of the channel, the bed of the channel and the flow within the channel govern channel evolution and change

| Asynchronous Lectures/Presentations | 19  
| Asynchronous Other             | 5  
| Guided Independent Study       | 107  
| **Total Module Hours**         | **150**

**Intended Learning Outcomes**

On successful completion of the module, students should be able to:

- Understand the role that tropical forests in SE Asia play in the physical environment (such as the carbon cycle) and in the human social environment (development and livelihood)
- Gain experience using some of the tools that are available to observe, measure and understand processes that exist in the tropical forests of SE Asia
- Understand the influence of geographical research on policy and development issues in the region

**Teaching and Learning Methods**

Lectures, seminars, tutorials, computer based practicals
