LIIPS seminar - 'Human Factors in Healthcare'

26 April 2017

The East Midlands Patient Safety Collaborative in partnership with Health Education England, East Midlands have been working together to develop Human Factors solutions to Patient Safety issues.

42 delegates met on 26 April 2017 at a seminar, hosted by LIIPS, to showcase and demonstrate the impact of some of the Human Factors solutions that have been trialled locally in the NHS. Members of 5 project teams, NHS staff supported by human factors experts, presented their work and learning. Please click here to view the final programme and the available slides.

This event celebrated the success of the Health Education England (HEE) Human Factors Exchange. The history and achievement were outlined by Dr Chetna Modi whose slides are available here. This group has been important in developing the local capacity and capability of knowledge and sharing of human factors in healthcare. The projects were a collaborative partnership between HEE and EMAHSN’s Patient Safety Collaborative.

Human Factors is the study of relationships between human behaviour, system design and safety.

“Really interesting, thank you!”; “Small changes can have huge impact.”
