LIIPS workshop
‘Design, development and implementation of visual tools for healthcare’

8 December 2017 1.30 – 4.30pm

Dr. Nicola Bateman and workshop attendees

Visual Management is the use of visual tools to show performance on key measures usually over time, to inform team decision-making

Dr. Nicola Bateman led this workshop for users of visual tools in a healthcare environment. It provided examples of visual tools practice from healthcare and identified good practice and theory on which delegates could develop and improve their own visual tools (see slides). Delegates were supported to critique their own visual tools or start to develop visual tools.

It is anticipated that a supportive community of practice will grow from attendees.

“Really good session, thanks”

“Really helpful, lots of ideas. Great presentation”
